Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	15 October 2022
Team ID	PNT202022TMID35159
Project Name	Efficient Water Quality Analysis and Prediction using Machine Learning
Maximum Marks	4 Marks

Technical Architecture:

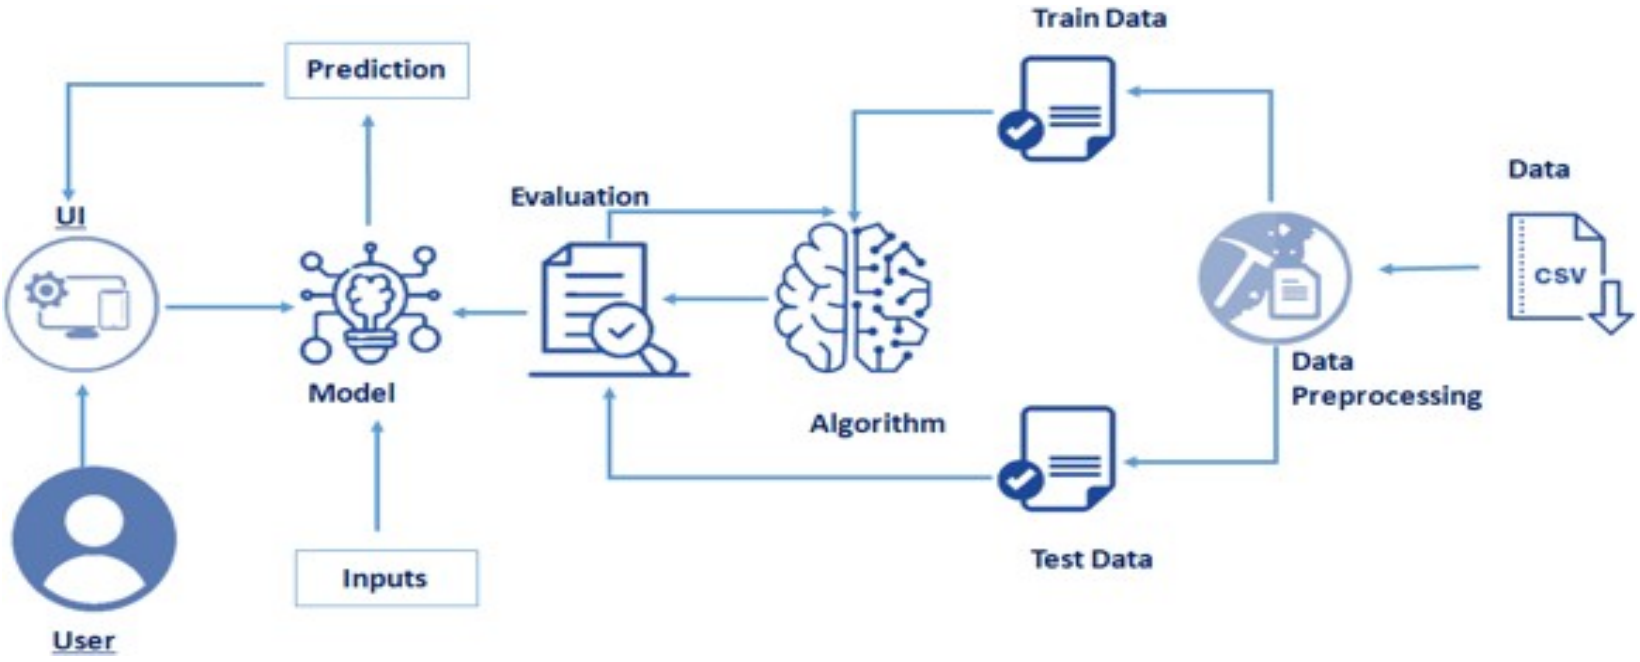

Table-1 : Components & Technologies:

S.NO	Component	Description	Technology
1.	User Interface	How user interacts with application e.g.Web UI, Mobile App, Chatbot etc.	HTML, CSS, Python
2.	Application Logic-1	Logic for a process in the application	ML Algorithms.
3.	Application Logic-2	Logic for a process in the application	IBM Watson STT service
4.	Dataset	Data Type, Configurations etc.	Dataset used for this project isdownloaded from Kaggle.
5.	Cloud Database	Database Service on Cloud	IBM DB2, IBM Cloudnet etc.
6.	File Storage	File storage requirements	IBM Block Storage or Other Storage Service or Local Filesystem
7.	Machine Learning Model	Purpose of Machine Learning Model	Classification and Regression model
8.	Infrastructure (Server / Cloud)	Application Deployment on Local System / CloudLocal Server Configuration: Cloud Server Configuration :	Local, Cloud Foundry, Kubernetes, etc.

Table-2: Application Characteristics:

S.NO	Characteristics	Description	Technology
1.	Scalable Architecture	Water quality index (WQI) and water quality Classification (WQC) are accurately predicted.	Surface water quality assessment toolwill be used here
2.	Availability	Our model will keep working and be available forwork even if there is infrastructure failure.	Machine learning
3.	Performance	The system effectively compares the input parameters given by the users with the dataset	Digital twin technology
